

Vehicles: An Overview

Cars are the most common form of personal transportation. They typically run on gasoline or diesel, though electric vehicles (EVs) are becoming increasingly popular due to environmental concerns.

Heavy construction vehicles like bulldozers, cranes, and excavators are vital in building infrastructure. These are powerful machines designed for specific tasks in construction and engineering.

There are many types of vehicles, including land vehicles like cars, buses, trucks, and motorcycles; watercraft like boats and ships; and aircraft like airplanes and helicopters.

Autonomous or self-driving vehicles represent the future of transport. These use AI and sensors to navigate roads without human intervention, potentially increasing safety and reducing traffic incidents.

Electric vehicles have gained momentum in the global market. They produce zero emissions, run more quietly, and often require less maintenance than traditional internal combustion engine vehicles.
